# SCHROEDER BULLS

## "Common Sense Cattle"

*We measure it -- so  
you can manage it!!*

- **Schroeder Ranch explanation of the important measurement traits found in the Sale Catalog:**

### ASTRONOMY CHART

#### EPDs ....Expected Progeny Differences

(breed average): For active sires:

**CE** .....Calving Ease (104)

**BW** .....Birth Weight (1.3)

**WW** .....Weaning Weight (41)

**YW** .....Yearling Weight (74)

**MK** .....Milk (17)

**TM** .....Total Maternal (38)

**GL** .....Gestation Length (-1.5)

**CED** .....Daughter's Calving Ease (105)

**SC** .....Scrotal Circumference (0.4)

**ST** .....Stayability (cow's ability to produce a calf after age 6) (5)

**CW** .....Carcass Weight (7)

**REA** .....Ribeye Area (.06)

**MB** .....Marbling (-0.05)

**DfT** .....Days to Finish (3.6)

**CV** .....Carcass Value (2.52)

**FM** .....Feedlot Merit (extra dollars based on pounds gained from Weaning Weight to Yearling Weight (7.55)

### Welcome Beef Producers to our 11th Annual Gelbvieh & Balancer Production Sale

This year we will be offering 48 Gelbvieh and Balancer bulls along with our top 16 commercial heifers. These are Common Sense Cattle for Real World Cattlemen.

As in the past we will have performance test information, DNA tests for (marbling, tenderness, and feed efficiency), Ultrasound carcass data, and semen test and scrotal information. The black bulls have tested for homo black and are so marked. I know this seems like a lot of information to sort through, but we feel it is all necessary for you to make the most informed decision on what bulls will work in your operation.

Thanks again to those of you who have bought bulls in the past, and to those of you that have not seen our cattle, thank you for taking the time to study and evaluate the bulls we have for sale. If you have any questions or would like to view the sale offering prior to the sale, please contact me at 605-366-5693 or Dustin Tolsma at 605-539-0235. I look forward to seeing you April 4th.

Sincerely,  
Steve

Find us at:  
[www.schroedercattle.com](http://www.schroedercattle.com)

**SALE LOCATION:** Take the Mitchell Exit #332 off I-90 and go south. Take the 1st left and follow the road east to Mitchell Livestock (straight East of Cabela's).

**HEALTH:** Bulls are fertility tested, scrotal measured, poured and vaccinated!

**ULTRASOUND DATA:** All bulls will be ultrasounded.

**DNA TESTING:** All double black bulls have been DNA tested for coat color. Homozygous black bulls will be identified.

**FREE CARE** of your purchase(s) until delivery -- we would like to continue to "develop" the bulls for you! Leave your trailer at home -- we'll have them "ready" for turn out for you.

#### RING SERVICE:

Jeff Kapperman, *Tri-State Neighbor*  
Val Luckett, *Mitchell Livestock*  
Tim Moody, *Mitchell Livestock*

**AUCTIONEER:** Kevin Thompson

The number one yearling weight bull! His ratios are such, BW 97, WW 112, YW 116! Big time 4.74# per day gainer! Dam is a 13 year old cow that will calve again this spring. She has earned her +28 milk EPD by year after year bringing in a big strapping calf. A little more frame on this bull, which is surprising considering his dam is pretty moderate!

Dark red Louie son out of a 2106 x Hank cow. The common denominator in a lot of our cattle is "HANK"! Big top in this bull. Last year bull sold to Wayne Scheich.

Another good Big N' Rich bull with a very good natured attitude. Heavy muscled bull. He is easy to find because quite frankly he usually finds you! Super gainer at 4.47# per day to go with a good 15 in adj. REA! Again, no extremes just well balanced.

# A *new* AGE IN DNA-MARKER TECHNOLOGY

## What are GeneSTAR MVPs

Now GeneSTAR® from Pfizer Animal Genetics provides a new 56 DNA-marker panel that delivers more genetic information on core traits with greater reliability. GeneSTAR MVPs™—or Molecular Value Predictions—measure the molecular breeding values for the traits of feed efficiency, marbling and tenderness. This new panel, *authenticated through a third-party validation process*, will enhance genetic improvement by providing more reliable information to enable greater selection opportunities.

GeneSTAR MVPs incorporate the 11 DNA markers included in the previous GeneSTAR test along with information from an additional 45 DNA markers to form the new 56 DNA-marker panel. MVPs are reported in units of the trait as a prediction of the animal's genetic value.

Trait	Definition	Units	MVP Range*	Average % Reliability**
Feed Efficiency <sup>1</sup>	Difference between an animal's actual and expected feed intake based on its body weight and growth rate	lbs./day	<b>Min: -3.17</b> Max: 2.38	31%
Marbling <sup>2</sup>	Degree of intramuscular fatness in the <i>longissimus dorsi</i> (ribeye) muscle	Marbling Score 0–9	Min: -1.00 <b>Max: 1.11</b>	21%
Tenderness	Force required to shear a cooked steak after postmortem aging	W-B Shear Force (lbs.)	<b>Min: -1.04</b> Max: 1.89	52%

\*The closer the MVP value is to the highlighted Minimum or Maximum in each row, the more favorable the result.

\*\*The reliability value is expressed as a percentage of the maximum true accuracy attainable.

## How to use GeneSTAR MVPs

The new GeneSTAR MVP reporting system provides information on the animal and its genotype that can be used to make breeding and management decisions. Reading the MVP data, the animal in the example below has a GeneSTAR MVP feed efficiency value of -0.73 lbs. and a % rank value of 26 percent. This means that the MVP value for this animal ranks in the top 26 percent of animals within the same breed.

As a full-service genomics provider, Pfizer Animal Genetics offers a team of professionals to help customers achieve maximum value from the application of test results in production-marketing systems. This includes helping you understand test information and apply results to your own management and marketing programs.

### Molecular Value Prediction

	FE	Marb	Tend
<b>MVP</b>	-0.73	0.01	-0.93
<b>% Rank</b>	26%	49%	7%

A sample GeneSTAR MVP report with individual percentile rank is shown at left. In addition, overall herd and breed ranges for MVPs and trait accuracies are listed in the report.

For specific questions regarding animals that may have been recently tested, or any other inquiries relating to the new GeneSTAR system, contact your Pfizer Animal Genetics representative, call 1-877-BEEF DNA or go to [www.pfizeranimalgenetics.com](http://www.pfizeranimalgenetics.com).

1 Validated in *Bos Taurus* populations only, additional information available on file for *Bos Indicus*. Feed Efficiency is measured as Net Feed Intake.

2 In NBCEC validation, the marbling MVP is significantly associated with Ultrasound as % IMF at 60 days prior to harvest.
